Filler Ball For Chemical Industry

1,Introduction of Filler Ball For Chemical Industry

The product takes kaolin and feldspar glass sintered body as the structure bridge. The product has excellent chemical corrosion resistance. Except hydrofluoric acid, it can resist all acid gases such as inorganic acid and organic acid, neutral gas corrosion, and can be used as catalyst covering material, proppant and protective agent in chemical equipment.

2,Characteristics of Filler Ball For Chemical Industry

- 1) compact sintering, hard texture, no pulverization
- 2) High temperature resistance 1300℃
- 3) Antioxidation, Wear Resistance
- 4) Excellent quench and heat resistance
- 5) acid and alkali corrosion resistance

3,Product application effect:

Products in the petrochemical industry, fertilizer industry, natural gas industry, environmental protection industry packing tower has been widely used. After using the product, the treatment efficiency of the tower is high, the pressure drop is reduced, the flow rate is increased, the impact on the catalyst is reduced, and the service life of the catalyst is prolonged.
